

Webroot SecureAnywhere® Global Site Manager Console

Reduce Time and Management Costs with Global Views, Policies, Overrides, Hierarchical Management, Granular Administration, and Access Rights

OVERVIEW

Because an increasing number of managed service providers (MSPs) and larger enterprises deploy Webroot SecureAnywhere® solutions to secure multiple customers and sites, Webroot offers an enhanced Global Site Manager management console. This console is specifically designed to accommodate the more complex and highly granular security management requirements of administering multiple customers or sites.

The Webroot SecureAnywhere Global Site Manager console is provided as a no cost option to any organization needing the increased control and flexibility it delivers. Its hierarchical design makes it much easier to manage multi-site, multi-organization or multi-administered deployments. And, as the console is cloud-based, we are continuously upgrading its functionality and capabilities based upon a continuous development roadmap and direct customer feedback—ensuring it meets MSP and enterprise endpoint management requirements.

Multiple sites, multiple administrators, and immediate visibility into endpoints needing attention

FAST FACTS

Auto-provisioning

- » New parent/child keycodes – simplify monitoring and managing different entities like departments, subsidiaries, and customers
- » Generate child keycodes automatically from the console – identify, add, and remove departments, locations, or customers easily
- » Full, seamless administrative control – no delays in buying or applying for a new keycode from Webroot for each new entity

Unique Customer Consoles

- » Hierarchical management views make it easy to create and monitor multiple customer consoles or locations simultaneously
- » Separate customers or locations with unique administrative access permissions

Top Level Oversight Views

- » Real-time oversight with new top level views over individual and managed entities
- » Monitor endpoints that need attention

Advanced Searches and Filtering

- » A wide range of parameters to create refined filtered searches adding speed and flexibility when looking to identify individual or groups of endpoints

Administrator Site Notes

- » Administrators can add notes about each customer or location, such as billing cycles, seats allocated, etc.
- » Granular Access Rights and Permissions
- » Easily delegated admin access permissions for every customer or location under management

- » Fast, granular, customized access to individual entity management consoles with multi-tiered access permissions
- » Administrator permissions pop-up clarifies the precise capabilities and site permissions being granted for each administration type – super, limited, and site

Direct Access Management

- » New Global Site Manager console UI allows direct access to any customer, site, or other console
- » Seamless integration with existing console selection screens, plus the option to populate multiple MSP portals under a single account
- » All users are protected against new threats in real time

Global Policies and Overrides

- » Global Policies and Overrides make it simple for any 'super' administrator to create policies and overrides at the Global Site Manager level, and then apply them to any Endpoint Protection customer or site that accepts global commands
- » Globally import and export policies and overrides providing the ability to import and export policies and overrides between sites at Global Site Manager and site level

Zero On-site Infrastructure

- » Centralized online management for all endpoints
- » Highly automated management and reporting
- » No on-site management hardware or software
- » Full remote policy and endpoint management
